PREFACE

Reference works too often present an austere, depersonalized facade. Although one knows that they are man-made, one feels far removed from the people who labor behind the scenes to make them possible. The literature analysts and others who prepare the *Index Medicus* today are the intellectual descendants of a brilliant and imaginative individual who conceived of a comprehensive index when none existed, and of his successors who carried on the work in spite of frequent adversities.

The first volume of *Index Medicus* was published in 1879, but the story leading up to that event began in 1865, when Dr. John Shaw Billings, a surgeon in the Civil War, was assigned to the office of the Surgeon General of the Army. Among other duties, he was given responsibility for the Surgeon General's small medical library. Perceiving that there were few if any libraries in the country holding a substantial proportion of the medical literature, Billings set about a program of expansion. Within eight years, he had built a collection of 1,800 volumes into one containing over 50,000 volumes and pamphlets. Because there was then no comprehensive medical index, he proceeded with plans to publish a catalog of the library, and a periodical index to the current literature.

John Shaw Billings, M.D.

Undaunted when public funds were not authorized for the latter purpose, he found a publisher who would assume the entrepreneurial risk, some physicians to subsidize the project, and he contributed his own time, outside of duty hours, to the selection of the articles to be indexed.

"Few words are required to demonstrate the utility of the projected serial," wrote the editors in their introduction to Volume 1. "The practitioner will find the titles of parallels for his anomalous cases . . . and the latest methods in therapeutics. The teacher will observe what is being written or taught by the masters of his art in all countries. The author will be enabled to add the latest views and cases to his forthcoming work, or to discover where he has been anticipated by other writers."

An early crisis was announced at the end of Volume 6. "With this issue," reads the notice, "the *Index Medicus* will cease to be published." The publisher, Mr. Leypoldt, had died and the managers of his estate could not continue to support the losses that the publication of the *Index* had incurred from the start. "The time has come, therefore, when neither zealous friends nor generous publishers can be allowed to make further efforts or sacrifices, and the publication is discontinued. Whether it will, in some other shape, or under some other auspices, again appear, is for the future to decide." Happily another altruistic publisher was found promptly, and *Index Medicus* continued without missing a volume.

Dr. Billings had founded well, and the *Index Medicus* always received his support even while his energies were otherwise directed. The range of his activities, both during his tenure as head of the Library and after his retirement from the Army in 1895, was phenomenal. They encompassed not only the

Fielding H. Garrison, M.D.

Robert Fletcher, M.D.

operation of the Library but also aspects of the 10th Census (1880), assisting the organizers to staff the new Johns Hopkins Medical School and hospital and designing the hospital buildings, the organization and direction of the New York Public Library, and chairmanship of the Board of Trustees of the Carnegie Institution. From the beginning, a large part of the responsibility and credit for implementing Dr. Billings' idea was shared by his colleague and successor, Dr. Robert Fletcher, who carried on the work, with a minor interruption, from 1879 until his retirement in 1912 at age 89. He in turn was succeeded by Dr. Fielding Garrison who had earned a medical degree after joining the library staff in 1891, and had become Associate Editor in 1903. Dr. Garrison remained editor until the merger of Index Medicus with the Quarterly Cumulative Index in 1927. In addition to his editorial duties, he is renowned for his authorship of many historical papers and for his classic "An Introducton to the History of Medicine."

Although the Index Medicus underwent changes in title and frequency of issue, its publication over the past century was

sustained without interruption. The Library has always been involved in indexing the literature, even when the expenses of publishing have been borne by others. Among these were private companies (F. Leypoldt, 1879-1884, George S. Davis, 1885-1894, and Rockwell and Churchill, 1895-1899); the Institute of Bibliography in Paris (1900-1902); the Carnegie Institution (1903-1926); and the American Medical Association (1927-1959).

In 1960, the National Library of Medicine (the direct organizational descendant of the Surgeon General's Library) resumed publishing *Index Medicus* monthly under its original title, and its printing and distribution have been handled by the U.S. Government Printing Office. Also since 1960 there has been published an annual cumulation known as *Cumulated Index Medicus*. The first four annual volumes were published by the American Medical Association; since 1964 it has been published by the National Library of Medicine (NLM).

In 1960, the same year NLM resumed responsibility for publishing *Index Medicus*, the Library wrote specifications for

a computerized system to aid in its preparation. Not only has the new system facilitated an improved and more timely *Index Medicus*, but it has made possible the publication of a wide variety of specialized bibliographies and has also permitted individual searches of the entire data base of *Index Medicus* references.

Since 1970, searching of the NLM's computerized bibliographic data bases has been possible from remote locations. The number and size of these data bases have increased, as has the ease with which they may be searched. Over a thousand institutions now have access to these services.

John Shaw Billings, seeking to improve medical communication, relied on the printed word as the most available means toward that end. As *Index Medicus* begins its second century, NLM continues to seek new ways to foster professional communication among those in the health community, but for the foreseeable future *Index Medicus* will play an essential role in that effort.

Clifford A. Bachrach, M.D. Editor, Index Medicus

INTRODUCTION

Index Medicus is the the National Library of Medicine's monthly bibliography of the literature of biomedicine. The cumulated contents of the twelve monthly issues (January-December) comprise the annual Cumulated Index Medicus.

MATERIALS INDEXED

Index Medicus contains citations to the serial journal literature.

In the selection of materials for indexing, the National Library of Medicine is advised by a group of distinguished physicians, medical editors, and medical librarians. The Library indexes the literature that has been judged most useful to *Index Medicus* users, but it is not possible to include every journal that might contain useful articles.

An effort is made to maintain a reasonable balance of subject matter. The inclusion of a journal or monograph should not be constructured as indicating that it is considered superior to one that is not indexed; the omission of a publication does not necessarily reflect on its quality.

Original journal articles are indexed, as well as those letters, editorials, biographies, and obituaries that have substantive contents. Abstracts of articles are never indexed. In certain journals which cover fields other than biomedicine, only those articles related to biomedicine are selected for inclusion in *Index Medicus*.

Some journals that are published in a foreign language are also published in English translation, but *Index Medicus* cites only one source. This is almost invariably the original foreign language publication because it is available earlier and is the ultimate source of information concerning the author's intent. For up-to-date information about the availability of English translation journals, particularly Consultants Bureau translations of Soviet journals, a medical librarian should be consulted.

Beginning in 1971, the journal title abbreviations used in *Index Medicus* were formulated according to the rules of the *American National Standard for the Abbreviation of Titles of Periodicals.* The Library now follows the *International Standard ISO—4—1972: Documentation—International Code for the Abbreviation of Titles of Periodicals*, which is an adaptation of the American standard and nearly identical to it.

For the abbreviation of any specific journal cited in *Index Medicus*, see the *List of Journals Indexed in Index Medicus* (*LJI*) in the January issue of *Index Medicus* and in the annual cumulation. *LJI* is also available separately from the Government Printing Office (see National Library of Medicine Publications, inside front cover of any monthly issue of *Index Medicus*).

THE INDEXING OPERATION

Materials selected for inclusion are indexed by highly trained literature analysts. The content of each piece is described by assigning terms selected from Medical Subject Headings (MeSH), the Library's controlled vocabulary of technical terms. MeSH is published as Part 2 of the January Index Medicus and is reproduced in its entirety in Cumulated Index Medicus. Additional copies of MeSH may be purchased from the Government Printing Office (see NLM Publications, inside front cover of Index Medicus).

In indexing, the analyst assigns as many subject headings as are necessary to describe adequately the content of each article or chapter.

Each journal article is cited in *Index Medicus* only under those subject headings which represent the most important concepts of the article. All subject headings, including those representing more peripheral concepts, are stored in MEDLINE (Medical Literature Analysis and Retrieval System Online), the Library's computer-based file of citations, for use in machine retrieval.

In *Index Medicus*, citations are published only under terms appearing in *MeSH*. If the medical concept sought is not in *MeSH* the *MeSH* equivalent must be found. For example, citations on German measles would appear in *Index Medicus* under its *MeSH* equivalent, RUBELLA.

When materials are indexed for *Index Medicus*, the most specific terms available in *MeSH* are used. Thus, if an article is concerned with erythromycin, it would be indexed under that term, rather than the broader ANTIBIOTICS. Under the latter term, one would find only: (a) articles dealing with antibiotics generally, (b) those that deal in a very general way with a large number of named antibiotics, or (c) those that deal with specific antibiotics which have not been separately listed in *MeSH*.

The user who is interested in one concept may find that the broader term is also worth examining for articles of possible interest. Although one may be interested primarily in penicillin sensitivity, reports on the general subject of antibiotic sensitivity may be useful.

The user who wants information on some aspect of the use of antibiotics in pediatric practice would certainly want not only the general materials that would appear under ANTIBIOTICS, but also those concerned with specific antibiotics.

Because it is impossible to group together all terms directly or indirectly related to a particular concept, the following should be considered when searching this bibliography.

- 1. Direct form of the term (LUNG ABSCESS)
- 2. Inverted form of the term (ANEMIA, HEMOLYTIC)
- 3. Noun form (LIVER, KIDNEY, BRAIN)
- Adjective form (HEPATIC COMA, CEREBRAL REVAS-CULARIZATION)
- Function words which imply the concept in mind (THINKING for BRAIN, DIGESTION for GASTROINTESTINAL SYS-TEM)
- Terms for techniques which imply the concept in mind (ELEC-TROCARDIOGRAPHY for HEART)
- 7. Synonyms or near-synonyms (VERTIGO for DIZZINESS)
- 8. Broader and narrower terms.

The best way to find broader and narrower terms is by reference to the "tree structures" in MeSH, where terms are grouped into four-teen subject categories and arranged in a hierarchical manner with specific terms indented under the more general ones. For example, in subcategory D20, under ANTIBIOTICS, many types of antibiotics, such as ANTIBIOTICS, ANTINEOPLASTIC are listed. Indented under that term are several even more specific terms. (Terms followed by an asterisk (*) may be used for machine retrieval, but never appear as subject headings in Index Medicus.) Thus, broader or narrower terms may be found merely by scanning these hierarchical lists.

The *Index Medicus* user generally starts with one or more medical terms in mind which express his or her own subject interest. If the user does not find a given term in the alphabetical list, examination of an appropriate "tree structure" may reveal a synonym or a broader term under which the desired literature might have been indexed. When a usable term is found, examination of nearby entries in the alphai tic list may reveal related terms that are also worth searching in the *Index Medicus* Subject Section.

¹American National Standards Institute, American National Standards for the Abbreviation of Titles of Periodicals. Approved September 16, 1969.

SUBJECT SECTION

Each article cited in *Index Medicus* is printed under one or more subject headings, and the entry appears in full under each.

Journal Articles

Each entry contains the following elements, in order: original English title of article, or English translation of title in brackets; first author (if more than one) or sole author; journal title abbreviation; date of issue; volume number; issue, part or supplement; inclusive pagination; the notation Eng. Abstr. for those non-English articles which provide an abstract in English; and an abbreviation indicating the language of the article if other than English. For the names of all authors in a citation, refer to the Author Section. The journal title abbreviation is in bold-face type; the full journal title may be found in the abbreviations listing in the List of Journals Indexed in Index Medicus.

Examples of typical journal article citations:

Long-term evaluation of chlorambucil plus prednisone in the idiopathic nephrotic syndrome of childhood. Williams SA, et al. N Engl J Med 1980 Apr 24; 302 (17): 929-33

cited under CHLORAMBUCIL/ADMINISTRATION & DOSAGE, NEPHROTIC SYNDROME/DRUG THERAPY, and PREDNI-SONE/ADMINISTRATION & DOSAGE.

[Excretion of catecholamines in juvenile diabetes mellitus] Kornas-Dubejko A, et al. **Endokrynol Pol** 1979 Nov-Dec; 30(6):539-48 (Eng. Abstr.) (Pol)

cited under DIABETES MELLITUS, JUVENILE/URINE, EPINE-PHRINE/URINE, NOREPINEPHRINE/URINE.

Order of Citations:

Under each subject heading, the entries are grouped according to the original language of the text, with the English-language items appearing first, followed by citations for works published in other languages, arranged alphabetically by language. Within each language group, the articles are alphabetically ordered by journal title abbreviation.

Non-English Language Abbreviations

Afr	Afrikaans	Kor	Korean
Alb	Albanian	Lit	Lithuanian

AUTHOR SECTION

Author:

References in the Author Section cite all author's names in boldface type. Complete citations are printed only under the first author's name; all other author's names are cross referenced to the full reference under the first author's name, as for this citation:

Brown RA. Gibbs JH, Robertson AJ, Potts RC, Beck JS. Development of asynchrony in growth of normal human lymphocytes during first day of culture after PHA stimulation. Exp Cell Res 1980 Mar;126(1):87-97

Beck JS see Brown RA Gibbs JH see Brown RA Potts RC see Brown RA Robertson AJ see Brown RA

Title:

The author is followed by the title of the article or monograph chapter in the vernacular, and then the other bibliographic elements as they appear in the Subject Section (described above). The title of the article is supplied in translated form only (as in the Subject Section), and not in the vernacular, for citations in the following languages: Arabic, Armenian, Azerbaijani, Chinese, Georgian, Hebrew, Indonesian, Japanese, Korean, Persian, Pushto, Thai, and Vietnamese. Titles in the following languages are transliterated into Roman script: Bulgarian, Greek, Russian, Serbo-Croatian, and Ukrainian.

Example of title in the vernacular:

Wahl H, Radochay L. Ergebnisse der operativen Behandlung der habituellen und rezidivierenden Schulterluxation. Beitr Orthop Traumatol 1979 Sep;26(9):507-9 (Ger)

Example of translated title:

Sakato M, Takahashi S, Sekiguchi S, Chujyo N. [Simulation of K-contracture curve in smooth muscle (author's transl)] Nippon Yakurigaku Zasshi 1979 Mar;75(2):171-83 (Eng. Abstr.) (Jp.

Example of transliterated title:

Kornas-Dubejko A, Szewczyk L, Zajackowska M. Wydalanie amin katecholowych w cukrzycy młodzienczej. Endokrynol Pol 1979 Nov-Dec;30(ú):539-48 (Eng. Abstr.)

Pol

Name of Individual as Subject:

Articles about individuals are cited in the Author Section with the subject's name enclosed in parentheses and preceding the other components of the entry. A separate entry is also provided under the name of the author in the usual manner. Anonymous biographies and obituaries appear only under the subject's names.

Example:

(Ingelfinger FJ), Relman AS. Franz J. Ingelfinger, 1910-1980.
N Engl J Med 1980 Apr 10;302(15):859-60
Relman AS. Franz J. Ingelfinger, 1910-1980.
N Engl J Med 1980
Apr 10;302(15):859-61

Anonymous Non-English Citations:

A separate subsection is provided at the end of the Author Section for anonymous non-English language references. Special treatment is accorded the material in order to have an authenic reference to the work in the original language form. In this subsection, the journal article entries are arranged alphabetically under the journal title abbreviation.

MEDICAL REVIEWS

Medical reviews are defined by the Library as well-documented surveys of the recent biomedical literature. In most cases the surveys include a list of references either in the body of the paper or as a bibliography. Articles which include case reports are considered reviews only when the case reports serve to document the subject of the review.

Materials with the following characteristics are *not* considered as reviews: case reports or original research articles containing a review of literature as an adjunct; statistical and epidemiological surveys; historical reviews, bibliographies which comprise only a listing of ref-

erences; monthly summaries of subject areas which appear as a regular feature in journals; theses; and lengthy publications covering many aspects of a specific subject which are more appropriately considered as refresher courses rather than reviews.

Citations to reviews are included in the "Medical Reviews" section of the monthly *Index Medicus* and *Cumulated Index Medicus* as well as in the Subject Section and Author Section of each.

OTHER BIBLIOGRAPHIC TOOLS

In many specialized fields of medicine, and in many allied sciences, there are available a variety of excellent indexes and abstracts, such as Chemical Abstracts and Biological Abstracts. More than 3,500 ti-

tles, with asterisks marking basic references especially useful to the smaller medical library, are listed in *Medical Reference Works*, 1679-1966: A Selected Bibliography (Chicago, Medical Library Association, 1967) and its supplements. Special information centers sponsored by medical institutions or professional societies exist to serve users interested in their respective subject fields. For current information about such additional aids relating to special subject items, the *Index Medicus* user should consult a local medical librarian.

Users are invited to send suggestions or refer any errors they find to:

Clifford A. Bachrach, M.D. Editor, *Index Medicus* National Library of Medicine Bethesda, Maryland 20209

ACCESS TO ARTICLES CITED

Users of Index Medicus who wish to consult articles are advised to utilize the following sources:

1. Reprints of articles are frequently available directly from the author or publisher.

- Medical libraries in local university medical centers, medical schools, health centers, hospitals, and state or county medical societies will often have the material on hand, or by means of union lists know where it can be obtained through interlibrary loan.
- 3. Special libraries or libraries of national associations in the various fields of medicine can provide much of the literature that is indexed.
- 4. If your librarian cannot obtain the material through interlibrary loan elsewhere, the loan request may be entered into the Regional Medical Library network for processing.

INTERLIBRARY LOAN POLICY (REVISED AUGUST 1980)

Most of the literature in the collection of the National Library of Medicine is available for loan to any library, with the exception of indexes and abstracts, general library and information science material, current trade publications for which the presumption of wide-spread availability is reasonable, and technical reports available from the National Technical Information Service. The Library will lend only those items which fall within the scope and coverage policy governing its collection. Requests for reprints should be directed to the author.

Readers who cannot obtain medical literature in their Regions and who cannot come to the National Library of Medicine in person may secure material through the interlibrary loan service by applying through their Regional Medical Library or local Resource Library. Libraries are required to avail themselves of the resources of their Region rather than addressing requests directly to NLM. Regional Medical Libraries and their participating Resource Libraries which are unable to fill requests will forward them to NLM for processing. NLM does not assume responsibility for referring requests for items it cannot supply.

Loans from NLM are made subject to compliance with the following regulations and instructions and the provisions of the National Interlibrary Loan Code of the American Library Association (ALA). Policies regarding fees for service are established by the Director.

FORM OF LOANS

1. The National Library of Medicine reserves the right to determine whether material will be lent in the original form or as a photoduplicate or microfilm.

In most cases, NLM will not provide a photoduplicate of any work in excess of fifty pages.

3. Generally, journal issues or volumes do not circulate. Most monographic works will be lent in the original form.

4. Literature in the History of Medicine collection, which includes works printed before 1871, is generally available for interlibrary loan, usually in the form of microfilm or photoduplicate, upon the same terms as the more recent literature.

METHOD OF BORROWING

1. Borrowing libraries will submit requests by teletypewriter or typed in triplicate on ALA Interlibrary Loan Request Forms. Requests made by letter or on other forms cannot be processed and will be returned to the sender. Each item or item segment must be requested on a separate form.

2. Interlibrary Loan Request Forms must bear the statement of compliance with the copyright law or guidelines and must be signed by an authorized person in the borrowing library. Requests sent by teletypewriter must also include a copyright compliance statement and authorizing name. Unsigned requests and those not indicating compliance will be rejected.

3. Requests for original loans transmitted on ALA Interlibrary Loan Request Forms must be accompanied by a label bearing the address of the requesting library.

CITATIONS

1. Citations should be complete. Periodical references should contain the name of the journal, date of issue, volume and number, and author, title, and full pagination of article. References to books should include full name of author, title, edition, place, publisher, and date of publication. Omission of any of these items could result in rejection of the request.

 Citations for all requests verified in NLM publications or NLM data bases must include DNLM call numbers when available, otherwise they will be considered incomplete and subject to rejection.

3. Libraries are requested to provide the source of verification whenever possible. If the borrowing library has exhausted its bibliographic resources in attempting to verify the citation, notation to that effect and summary of sources searched should be furnished on the form.

4. If a reference cannot be verified by the requesting library, the bibliographic citation to its source should be given.

LOAN PERIOD

1. The borrowing library must return original material and microfilm by the indicated due date. No renewal will be granted.

2. An original volume lent by NLM may be recalled at any time.

DELIVERY AND RETURNS

1. All loans will be sent out by NLM with postage paid.

The borrowing library should take great care in packing materials for return to NLM. Corners and edges of books should be well protected; unbound material should not be rolled, but should be sent flat.

3. The borrowing library will pay postage for the return of borrowed material.

4. Borrowing libraries are responsible for volumes from the time they receive them until the volumes are returned to NLM and received there. Materials lost during that interval must be replaced by the borrowing library. For the protection of the borrower, books should be insured while in transit.

REQUESTS FROM FOREIGN COUNTRIES

- Requests which are filled for foreign libraries are assessed a fee.
 Requesters will be billed; advance payment is not accepted.
- Materials in the original form and microfilms do not circulate outside of the United States.

SPECIAL PHOTOGRAPHIC SERVICES

1. Special procedures are required to provide photographs or slides of such items as portraits, halftones, photographs, prints, charts, and other pictorial work. A fee will be charged for this service. Cost estimates will be provided upon request.

2. Individuals or libraries wishing to purchase microfilm or other photocopy of books in the historical collection needed for extended research may write directly. All inquiries should be addressed to the Chief, History of Medicine Division. It is not possible to fill large orders for purposes of building collections.

3. Orders for special photographic services for materials requiring copyright owner's permission will not be accepted unless accompanied by this permission.

PREFACE TO 1981 MeSH

This 1981 issue of Medical Subject Headings (MeSH) is presented as the primary listing of subject descriptors which appear in Index Medicus.

As in previous years, citations will be found in *Index Medicus* only under those subject headings that appear in large type in this version of *MeSH*. However, terms which are "see under" cross references in *Index Medicus* are separately searchable in the MEDLINE computer files.

Health science users who have direct online access to the MEDLINE data base will find the annotated version of MeSH better suited to their needs. This contains geographic headings, "check tags," such as male, female, and human, and other data elements that are of value to the MEDLINE searcher, but that have no relevance for Index Medicus. The Medical Subject Headings Annotated Alphabetic List is available through the National Technical Information Service, U.S. Department of Commerce, 5285 Port Royal Road, Springfield, Virginia 22161.

The Library wishes to express its gratitude to the many scientists who have had sufficient interest to criticize various terms in *MeSH* and to make suggestions for its improvement. They thus assist the Library in its efforts to keep abreast of knowledge in the expanding fields of the health sciences.

MeSH INTRODUCTION

The 1981 Medical Subject Headings is the current authority list for the subject analysis of the biomedical literature in the National Library of Medicine. It presents the subject headings under which all citations will appear in Index Medicus, serves as the basis for search formulations in retrieval of bibliographic citations stored in the MEDLARS (Medical Literature Analysis and Retrieval System) computer files, and is the standard subject heading list for the cataloging of books and audiovisuals in the Library. This edition of MeSH is designed particularly for the needs of Index Medicus users. Also included is prefatory material of special interest to medical librarians.

Medical Subject Headings is divided into two sections: Alphabetic List and Tree Structures.

ALPHABETIC LIST

The Alphabetic List section contains the subject headings arranged in alphabetic order and cross referenced.

In the selection of terms as subject headings, the most commonly used forms of English expressions are generally preferred. The *MeSH* user must consider various related expressions. Thus, one interested in lungs may wish to consider looking also for terms containing the word roots pulmo- and pneumo-; in kidney, renal and nephr-.

The subject headings have been constructed primarily for the convenience of the user of Index Medicus. Therefore, direct natural-language sequence is not always used. When a group of terms share a basic concept, they are arranged alphabetically under that concept and not scattered throughout the alphabet. For example, tuberculosis in its various forms and relationships is expressed by a series of headings starting with TUBERCULOSIS (TUBERCULOSIS, AVIAN; TUBERCULOSIS, BOVINE; TUBERCULOSIS, CARDIOVASCULAR).

Criteria for selection of subject headings are: frequency of term usage in the medical literature; recognition of need for the term by various users of *MeSH*; recommendation by advisory panels on terminology; and the ability to assign relatively clear and precise definitions to the term.

Citations will be found in *Index Medicus* only under the *MeSH* headings that appear in large type. All other entries in the Alphabetic List are cross references, leading the user directly or indirectly, to appropriate *Index Medicus* headings.

Cross references are of several kinds:

Referring to another term	Corresponding "referred from" designation
see	x
see under	XU
see related	XR

For example:

LUTEINIZING HORMONE see LH

X LUTEINIZING HORMONE

"See under" is used to refer from a specific term that does not appear as an *Index Medicus* heading to a more general term which does.

The usage of the "see" cross reference differs somewhat from the practice followed in *MeSH* for 1974 and earlier years. The "see" reference formerly directed the user from a synonym to an *Index Medicus* heading. In our current usage, the terms contained in a "see" reference are no longer necessarily strictly synonymous, but bear a close relationship.

Also in contrast to previous MeSH practice, a "see" reference may sometimes refer the user to a "see under" reference, rather than directly to a heading that appears in Index Medicus. For this reason, the user of MeSH should always consult MeSH for the term to which the "see" refers before looking for citations in Index Medicus. Thus, MeSH indicates: "ORNI-THINE VASOPRESSIN see ORNIPRES-SIN," but ORNIPRESSIN is not a heading under which citations may appear in Index Medicus. If one looks up ORNIPRESSIN in MeSH, one finds "ORNIPRESSIN see under VASOPRESSINS." VASOPRESSINS is the heading under which any Index Medicus citations concerning ornithine vasopressin will be found. These double references have arisen incidental to certain MeSH changes that were instituted to improve the MEDLINE computer search capabilities.

The "see related" reference is used primarily to indicate related terms not occurring in the same subcategory. These may contain citations of direct pertinence to the area of interest. As in previous editions the most obvious cross references, as those from an organ to its diseases, are avoided.

A heading may be followed by a history note. The note begins with the year (since 1963) the heading entered the system as an *Index Medicus* heading; however, headings that have been in use continuously since 1963 do not have dates. If there is more than one date, the leftmost is the year of re-entry of a heading that had previously been deleted from the system. Where necessary, a range of dates is given.

The history note also traces changes in heading and cross references. The kinds of headings whose history notes trace these changes are 1) headings that existed previously as "see" or "see under" cross references, 2) headings that existed previously in a different form (spelled differently, inverted, formerly singular, etc.), and 3) headings now having "see" or "see under" cross references (shown under the heading following X or XU, respectively) that existed previously as headings themselves or as cross references to a different heading.

Example of a heading with a history note:

ADRENAL CORTEX
78,63-67 was see under ADRENAL
GLANDS 1968-77

The history note means that citations to articles on the adrenal cortex may be found in *Index Medicus* under ADRENAL CORTEX since 1978 and from 1963 through 1967, and under ADRENAL GLANDS from 1968 through 1977.

History notes pertaining to cross reference changes always appear with the heading to which they refer. For example, the history note for "FELINE CALICIVIRUS see CALICIVIRUSES" appears under the heading CALICIVIRUSES as follows:

CALICIVIRUSES

79; FELINE CALICIVIRUS was see under PICORNAVIRUSES 1975-78 X FELINE CALICIVIRUS Each heading is followed by one or more alphanumeric expressions (tree numbers) that direct the user to the place or places in the Tree Structures where the term is to be found. A plus sign following a tree number in the Alphabetic List indicates there are indented terms in the Tree Structures at that number. As explained under TREE STRUCTURES below, an indented term followed by an asterisk in the trees is a "see under" cross reference in the Alphabetic List and therefore not an *Index Medicus* heading.

In *Index Medicus*, headings may be subdivided by subheadings, discussed under SUB-HEADINGS at the end of this section.

An example of using MeSH is searching for headings on the topic "congenital defects." In the Alphabetic List the user will find the cross reference "CONGENITAL DEFECTS see ABNORMALITIES." Under ABNORMALITIES the user will note that the tree number is followed by a plus sign. If interested in specific congenital defects, the user should consider the specific headings indented under ABNORMALITIES at that number in the Tree Structures and should consider, in addition, headings for specific organs subdivided by the subheading "abnormalities."

TREE STRUCTURES

The "trees" are listed in which the subject headings are categorized, as Anatomy (Category A), Organisms (Category B), etc. Most categories are further divided into subcategories, each of which is identified by an alphanumeric designation. Thus, B1 includes Invertebrates, B2 includes Vertebrates, etc. The MeSH terms in each subcategory are arranged hierarchically, at as many as seven levels, from the most general to the most specific. Because of the branching structure of the hierarchies, these lists are sometimes referred to as "trees" for brevity. Each MeSH term appears in at least one place in the trees, and may appear in as many additional places as may be logically appropriate.

Although National Library of Medicine staff have consulted numerous respected sources in the process of developing the trees, these trees should not be regarded as representing an authoritative classification system. These are merely arrangements of terms for the guidance and convenience of persons who are assigning subject headings to or searching for literature

in *Index Medicus* and in other National Library of Medicine products and services. The trees contain only those terms that have been selected for inclusion in this thesaurus. Their structure frequently represents a compromise among the views and needs of particular disciplines and users, in the absence of any single universally accepted arrangement.

Those who index articles for inclusion in MEDLARS are instructed to find and use the most specific MeSH term that is available to represent each indexable concept. For example, articles concerning streptomycin will be found under the heading STREPTOMYCIN, while an article containing a new agent which is not yet in the vocabulary will be listed under the broader term ANTIBIOTICS. The indexers use the trees to locate appropriate headings. The user of Index Medicus may also consult the trees to find additional subject headings to express related concepts, whether at the same level or at higher or lower levels of specificity.

In the trees, each term is followed by the number that indicates its tree location. It may also be followed by one or more additional numbers, in smaller type, and truncated at the third level, indicating other tree locations of the same term. The numbers serve only to locate the terms in each tree and to alphabetize those at a given tree level. They have no intrinsic significance; e.g., the fact that D12.776.641 and D12.644.641 both have the three digit group 641 does not imply any common characteristic.

Terms that are "see under" references in the Alphabetic List appear in the trees and are indicated by an asterisk. One must bear in mind that citations concerned with these concepts do not appear in *Index Medicus* under these headings. However, citations may be sought under these terms in MEDLINE, the National Library of Medicine's computerized online citation retrieval system, and in some specialized MEDLARS recurring bibliographies. These terms are sometimes referred to as "minor descriptors."

If a concept is represented in *MeSH* by a "see under" cross reference, citations concerned with that concept will be found in *Index Medicus* under the heading indicated by the cross reference, and not necessarily under headings suggested by other tree locations. For example, "SILO FILLER'S DISEASE see under LUNG DISEASES" bears two tree numbers—one indicating a tree listing under LUNG DISEASES and the other a tree listing under AGRICUL-

TURAL WORKERS' DISEASES. Although citations concerning silo filler's disease may indeed be of interest to a person who is concerned with agricultural workers' diseases, the articles about silo filler's disease are cited in *Index Medicus* under the heading LUNG DISEASES, as indicated by the cross reference,

The trees also contain some terms that are followed by the designation (NON MESH). These are included for the purpose of indicating the logical structure and have no other function for *Index Medicus* users. NON MESH terms are never used for indexing, and are not in the Alphabetic List. Furthermore, the trees contain geographic headings (Category Z), which also do not appear in the Alphabetic List. These are indexing terms that are not *Index Medicus* headings but may be used in searching MEDLINE.

Because this edition of MeSH is designed for users of Index Medicus, information used primarily in indexing, cataloging, and MED-LINE searching has been omitted. For these purposes, use of Medical Subject Headings Annotated Alphabetic List, 1981 is recommended. This is available from:

National Technical Information Service U.S. Department of Commerce 5285 Port Royal Road Springfield, Virginia 22161

NEW HEADINGS & DELETIONS

Lists are provided of (a) new headings which have been introduced with 1981 MeSH, together with the headings under which these concepts were previously indexed followed by dates as a guide to when they were used, (b) headings which have been deleted, with the subject headings that have replaced them, and (c) the 1981 supplement of the cumulated new headings list.

SUBHEADINGS

There are 76 topical subheadings used for indexing in conjunction with subject headings. They afford a convenient means of grouping together those citations which bear on a particular aspect of a subject. Of course, not every subheading is suitable for use with every subject heading. A given subheading is used only with subject headings in the subcategories shown in parentheses after the subheading, as follows:

abnormalities (A1-9, A13-15)—Used with organs for congenital defects producing changes in the morphology of the organ.

- administration dosage (D)—Used with drugs for dosage forms, routes of administration, frequency and duration of administration, quantity of medication, and the effects of these factors.
- adverse effects (D, E, F4, H, J)—Used with drugs, chemicals, biological and physical agents, and manufactured products for unintended or undesirable reactions occurring in normal usage or accepted dosage; includes hypersensitivity or idiosyncrasy. Used for adverse effects or complications of diagnostic, therapeutic, anesthetic, surgical, and other procedures.
- analogs & derivatives (D1-7, D9-26)—Used with drugs and chemicals for substances that share the same parent molecule or have similar electronic structure but differ by the addition or substitution of other atoms or molecules. Used when the specific chemical heading is not available, and no appropriate group heading exists.
- analysis (A, B1, B3-6, C4, D, G3, J)—Used for the identification or quantitative determination of a substance or its constituents and metabolites; includes the chemical analysis of tissues, tumors, body fluids, organisms, plants, air, water, or other environmental carrier. Applies to both methodology and results. For analysis of substances in blood, cerebrospinal fluid, and urine, the specific subheading designating the fluid is used.
- anatomy & histology (A, B1, B2, B5, B6)—Used with organs, regions, and tissues for normal descriptive anatomy and histology; used for normal anatomy and structure of animals and plants.
- antagonists & inhibitors (D)—Used with chemicals, drugs, and endogenous substances to indicate substances or agents which counteract their biological effects by any mechanism.
- biosynthesis (D)—Used for the formation of chemical substances in organisms, in living cells, or by subcellular fractions.
- blood (B2, C, D, F3)—used for the presence or analysis of substances in the blood; also for examination of, or changes in, the blood in disease states. Excludes serodiagnosis, for which "diagnosis" is used, and serology, for which "immunology" is used.

- blood supply (A1-6, A8-10, A13-16, C4)—Used for arterial, capillary, and venous systems of an organ or region whenever the specific heading for the vessel does not exist; includes blood flow through the organ.
- cerebrospinal fluid (B2, C, D, F3)—Used for the presence or analysis of substances in the cerebrospinal fluid; also for examination of or changes in cerebrospinal fluid in disease states.
- chemical synthesis (D)—Used for the chemical preparation of molecules in vitro. For the formation of chemical substances in organisms, living cells, or subcellular fractions, use "biosynthesis."
- chemically induced (C, F3)—Used for diseases, syndromes, congenital abnormalities, or symptoms caused by chemical compounds in man or animals.
- classification (A11, B, C, D, E, F, G, H, I, J, K, L, M, N)—Used for taxonomic or other systematic or hierarchical classification systems.
- complications (C, F3)—Used with diseases to indicate conditions that co-exist or follow, i.e., co-existing diseases, complications, or sequelae.
- congenital (C1-15, C17-23)—Used with disease headings to indicate those conditions existing at, and usually before, birth; excludes morphologic abnormalities and birth injuries, for which "abnormalities" and "injuries" are used.
- cytology (A, B)—Used for normal cellular morphology of unicellular and multicellular organisms.
- deficiency (D)—Used with endogenous and exogenous substances which are absent or in diminished amount relative to the normal requirement of an organism or a biologic system.
- diagnosis (C, F3)—Used with diseases for all aspects of diagnosis, including examination and differential diagnosis; excludes mass screening for which "prevention & control" is used. "Radiography" is used for radiographic diagnosis.
- diagnostic use (D, H)—Used with chemical compounds, drugs, and physical agents when

- used for studies of clinical function of an organ, or for the diagnosis of human or animal diseases.
- diet therapy (C, F3)—Used with disease headings for dietary and nutritional management of the disease. Does not include vitamin or mineral supplements, for which "drug therapy" may be used.
- drug effects (A, B, F1, F2, G4-11)—Used with organs, regions, tissues, or organisms and physiological and psychological processes for the effects of drugs and chemicals.
- drug therapy (C, F3)—Used with disease headings for the treatment or prevention of the disease by the administration of drugs, chemicals, and other therapeutic agents, such as antibiotics and tissue extracts. Excludes diet therapy, for which "diet therapy" is used, and excludes biologicals, for which "therapy" is used.
- economics (C, E, F3, F4, G1-3. I2, J, L, N2-4)— Used for the economic aspects of any subject, as well as for all aspects of financial management.
- education (E, F, G1-3, H, I, J, K, L, M, N1, N2)—Used for education and training programs in various fields and disciplines and for training groups of persons.
- embryology (A1-10, A13-15, B1, B2, B6, C)— Used with organs, regions, and animal headings for embryologic and fetal development; also used with diseases for embryologic factors contributing to postnatal disorders.
- enzymology (A, B1, B3-6, C, F3)—Used with organisms, except vertebrates, and with organs and tissues; also used with diseases for enzymes during the course of the disease. Excludes diagnostic enzyme tests, for which "diagnosis" is used.
- ethnology (Z)—Used with geographic headings to indicate the place of origin of a group of people. (This subheading is listed for completeness but does not apply to searching Index Medicus since geographic headings (Category Z) are not Index Medicus headings.)
- etiology (C, F3)—Used with diseases for causative agents including microorganisms; includes environmental and social factors and

- personal habits as contributing factors; includes pathogenesis.
- familial & genetic (C, F3)—Used for studies of genetic basis of disease; studies of diseases occurring in family groups due to environmental factors including infection and common family dietary habits; includes hereditary disease.
- genetics (B, D6, D8-13, D24)—Used for studies of the mechanisms of heredity in organisms, or genetic aspects of endogenous chemicals.
- growth & development (A1-9, A13-15, B)—
 Used with microorganisms, plants, and the postnatal period of animals for growth and development; includes postnatal growth or development of organs or anatomical parts.
- history (C, D, E, F, G1-3, H, I, J, K, L, M, N)— Used for the historical aspects of any subject; includes brief historical notes. Excludes case histories.
- immunology (A, B, C, D, F3)—Used for immunologic studies of tissues, organs, microorganisms, fungi, viruses, and animals; includes immunologic aspects of disease but not immunologic procedures used for diagnostic, preventive, or therapeutic purposes, for which "diagnosis," "prevention & control" or "therapy" are used. Also used for chemicals as antigens or haptens.
- injuries (A1-9, A13-15)—Used with anatomic headings for wounds and injuries. Excludes cell damage, for which "pathology" is used.
- innervation (A1-7, A9, A13-16)—Used with organs, regions, or tissues for their nerve supply.
- instrumentation (E, F2, F4, G1-3, H, J, L)— Used with diagnostic or therapeutic procedures, analytic technics, and specialties or disciplines, for the development or modification of apparatus, instruments, or equipment.
- isolation & purification (B1, B3-5, D)—Used with bacteria, viruses, fungi, and protozoa for the obtaining of pure strains; includes culture technics. Also with biological substances and chemicals for the isolation and purification of the constituents.
- legislation & jurisprudence (I1, I2, N2-4)— Used for laws, statutes, ordinances, or gov-

- ernment regulations, as well as for legal controversy and court decisions.
- manpower (E6, F4, G1, G2, H, I, J, L, N2-4)— Used with disciplines and programs for the demand, supply, distribution, recruitment, and use of personnel.
- metabolism (A, B, C, D, F3)—Used with organs, cells and subcellular fractions, organisms, and diseases for metabolism; with drugs and chemicals for absorption, distribution, and excretion. For biosynthesis, enzymology, and secretion use the corresponding subheadings.
- methods (E, F4, G1-3, H, I, J, L, N)—Used with technics, procedures, and programs for methods.
- microbiology (A, B1, B2, B6, C, F3)—Used with organs, animals and higher plants and with diseases for microbiologic studies. For parasites, "parasitology" is used.
- mortality (C, E, F3, F4)—Used with diseases for mortality statistics, and with procedures for deaths resulting from the procedure.
- nursing (C, E, F3)—Used with diseases for nursing care and technics in their management; includes the nursing role in diagnostic, therapeutic, and preventive procedures.
- occurrence (C, F3)—Used with diseases for incidence and prevalence; includes endemic and epidemic outbreaks; includes surveys and estimates of morbidity in geographic areas and in subdivisions of populations. Excludes mortality, for which "mortality" is used.
- organization & administration (I2, L, N2-4)— Used for administrative structure and management.
- parasitology (A, B1, B2, B6, C, F3)—Used with animals, higher plants, organs, and diseases for parasitic factors; do not use if the parasitic involvement is implicit in the diagnosis.
- pathogenicity (B1, B3-5)—Used with microorganisms, viruses, and parasites for studies of their ability to cause disease in man or animals.
- pathology (A, C, F3)—Used for organ, tissue, or cell structure in disease states.

- pharmacodynamics (D)—Used with drugs and exogenously administered chemical substances for their actions on tissues or organisms; includes effects upon metabolism, acceleration or inhibition of biological processes, and the mechanisms of action.
- physiology (A, B, D, F1, F2)—Used with organs, tissues, and cells of unicellular and multicellular organisms for normal function; used also with biochemical substances, endogenously produced for their physiologic role.
- physiopathology (A, C, F3)—Used with organs and diseases for disordered function in disease states.
- poisoning (D, J)—Used with drugs, chemicals, and industrial materials for human or animal poisoning, acute or chronic, whether the poisoning is accidental, occupational, suicidal, by medication error, or by environmental exposure.
- prevention & control (C, F1, F3, G3, I1)—Used with disease headings for increasing human or animal resistance against disease (e.g., immunization); for control of transmission agents; for prevention and control of environmental hazards; for prevention and control of social factors leading to disease; includes preventive measures in individual cases.
- psychology (C, F3, E1-6, M)—Used with nonpsychiatric disease, technics, and named groups for psychologic, psychiatric, psychosomatic, psychosocial, behavioral, and emotional aspects, and with psychiatric disease for psychologic aspects.
- radiation effects (A, B, D, F1, F2, G4-12, J)— Used for effects of ionizing and non-ionizing radiation upon living organisms, organs and tissues, and their constituents, and upon physiologic processes; includes effect of irradiation on drugs and chemicals.
- radiography (A, C)—Used with organs, regions, and diseases for x-ray examinations.

 Does not include radionuclide imaging for which "radionuclide imaging" is used.
- radionuclide imaging (A, C)—Used for radionuclide imaging of any anatomical structure, or for the diagnosis of disease.

- radiotherapy (C)—Used with disease headings for the therapeutic use of ionizing and non-ionizing radiation; includes use of radioiso-tope therapy.
- rehabilitation (C, E4, F3)—Used with diseases and surgical procedures for the restoration of function of the individual.
- secondary (C4)—Used to indicate the secondary location to which the neoplastic process has metastasized.
- secretion (A, C4, D)—Used for the discharge across the cell membrane into the intracellular space or ducts of endogenous substances resulting from the activity of intact cells of glands, tissues, or organs.
- standards (D, E, F4, G1-3, H, I, J, L, N)—Used with facilities, personnel, and programs for the development, testing, and application of standards of adequacy or acceptable performance; used with chemicals and drugs for standards of identification, quality, and potency; includes health or safety standards in industries and occupations.
- supply & distribution (D, E, F4, H, I, J, L, N2-4)—Used for the quantitative availability and distribution of material, equipment, health servces, facilities. Excludes food supply and water supply in industries and occupations.
- surgery (A, B2, C, F3)—Used for operative procedures on organs, regions, or tissues in the treatment of diseases; also for surgery of vertebrate animals; includes tissue section by lasers. Excludes transplantation, for which "transplantation" is used.
- therapeutic use (D, H)—Used with drugs, biological preparations, and physical agents for their use in the prophylaxis and treatment of disease; includes veterinary use.
- therapy (C, F3)—Used with diseases for therapies except drug therapy, diet therapy, radio-

- therapy, and surgery for which subheadings exist; also to be used for articles dealing with multiple therapies.
- toxicity (D, J)—Used with drugs and chemicals for experimental studies of ill effects on man or animals; includes studies to determine margin of safety of the reactions accompanying administration at various dose levels; used also for studies of exposure to environmental agents.
- transmission (C)—Used with diseases for studies of the modes of transmission.
- transplantation (A)—Used with organs, tissues, or cells for transplantation from one site to another within the same subject, or from one subject to another of the same species or different species.
- trends (E, F4, G1-3, I, N)—Used for the manner in which a subject changes, qualitatively or quantitatively, with time, whether past, present, or future. Excludes discussions of the course of disease in particular patients.
- ultrastructure (A1-11, A13-16, B, C4)—Used with tissues and cells (including neoplasms), and microorganisms for microanatomic structures, generally below the size visible by light microscopy.
- urine (B2, C, D, F3)—Used for the presence or analysis of substances in the urine; also for the examination of, or changes in, the urine in diseases.
- utilization (E, G1-3, H, I, J, L, N)—Used with equipment, facilities, programs, services, and health personnel for their actual use.
- veterinary (C1-21, C23, E)—Used for naturally occurring diseases in animals, or for diagnostic, preventive, or therapeutic procedures used in veterinary medicine.

USE OF MEDICAL SUBJECT HEADINGS FOR CURRENT CATALOG AND AUDIOVISUALS CATALOG

The National Library of Medicine uses Medical Subject Headings as the authoritative source for cataloging books, serials, and audiovisual materials.

In addition to the topical subheadings used for indexing (listed in the previous section) catalogers may use the following topical subheadings with headings in categories C, E, F, and G:

in adolescence in middle age in adulthood in old age in infancy & childhood in pregnancy

In cataloging, a *MeSH* heading may also be modified by form, geographic, and language subheadings. These are listed below. When more than one type of subheading is used with a heading, the subheadings are listed in a fixed order: topical, geographic, form, language. Geographic subdivision is always direct.

In some form subheadings that are hyphenated, the part of the subheading preceding the hyphen is used as a topical subheading. For example, a publication cataloged under PSY-

CHIATRY—periodicals—bibliography is a bibliography, in form, of the subject "periodicals in psychiatry."

Headings to be subdivided geographically are those for the specialties (MEDICINE, SCIENCE, DENTISTRY, etc.) and those that have the topical subheading "economics," "education," "history," "manpower," "mortality," "occurrence," "prevention & control," "supply & distribution," or "utilization," or the form subheading "directories," "legislation," or "statistics." Directories of specialists in the field are given the specialty heading subdivided by the geographic subheading and the form subheading "directories." A history of the practice in one locality is given the specialty heading subdivided by "history" and the geographic subheading.

Additional headings that may be subdivided by place are annotated as such in *Medical Subject Headings Annotated Alphabetic List*, 1981. The annotated publication also contains scope notes for the form subheadings and other annotations used in cataloging.

NEW HEADINGS-1981

A new heading either represents a concept with no directly corresponding heading in 1980 MeSH or replaces a directly corresponding heading deleted for 1981. A previously-indexed-under heading is a heading likely to have been used before 1981 to index material now covered by the new heading. It is followed by a date or range of dates as a guide to the period of time it was used.

3.7	Heading
NON	Moderna

Previously-Indexed-Under Heading

ADENOVIRIDAE

ADENOVIRUS (64-74) ADENOVIRUSES (75-80)

ADJUSTMENT DISORDERS

DEPRESSION, REACTIVE (69-80)

ADOLESCENT BEHAVIOR

AFFECTIVE DISORDERS

AFFECTIVE DISORDERS, PSYCHOTIC

AFFECTIVE SYMPTOMS

AFFECTIVE DISTURBANCES (69-80)

ALCOHOL AMNESTIC DISORDER

KORSAKOFF'S SYNDROME (64-80)

ALPHAVIRUSES

ARBORVIRUSES (64) ARBOVIRUS (65-74) ARBOVIRUSES (75-80)

AMBYSTOMATIDAE

ANAPHASE

CELL CYCLE (78-80) CELL DIVISION (64-77) MEIOSIS (68-77) MITOSIS (68-77)

ANTHROPOIDEA

PRIMATES (64-80)

ANTIGENS, IMMUNE RESPONSE

HISTOCOMPATIBILITY ANTIGENS (73-80) HL-A ANTIGENS (78-80) ISOANTIGENS (73-80)

ANTISOCIAL PERSONALITY DISORDER

ANTISOCIAL PERSONALITY (76-80) SOCIOPATHIC PERSONALITY (64-75)

ANURA

AMPHIBIA (64-80) FROGS (64-80) TOADS (64-80)

ANXIETY DISORDERS

NEUROSES, ANXIETY (64-80)

ARENAVIRIDAE

ARENAVIRUSES (78-80) RNA VIRUSES (66-77)

ARENAVIRUS INFECTIONS

ARENAVIRUSES (78-80) VIRUS DISEASES (66-80)

XXIV

SUPPLEMENT TO CUMULATED NEW HEADINGS—1981

A cumulated list of new headings for prospective searching of *Index Medicus* and other MEDLARS-based bibliographies was published in the 1971 *Medical Subject Headings*. The present list, based on the introduction of new headings for 1981, continues a series of annual supplements to that cumulation.

The listing is alphabetically arranged by the 1980 terms which have been replaced or further subdivided by a heading printed directly following the old term.

Users of Cumulated Index Medicus who are performing prospective bibliographic retrievals should consult these lists in order to assure that all citations on the subject will be found.

EXAMPLES:

1981 MONILIASIS-CANDIDIASIS.

In 1980, citations on this concept appeared under MONILIASIS. This term was deleted in 1981 and replaced by CANDIDIASIS.

1981 ENDOSCOPY-DUODENOSCOPY.

ENDOSCOPY remains as a heading in 1981, but the specific heading DUODENOSCOPY was introduced in 1981. Citations concerning duodenoscopy that previously would have been listed under ENDOSCOPY would no longer appear under that term but would be listed under the specific term DUODENOSCOPY in the 1981 Index Medicus.

1981	ACRYLIC RESINS	POLYMETHACRYLIC ACIDS
1981	ACTIVITIES OF DAILY LIVING	SELF CARE
1981	ADENOVIRUSES	ADENOVIRIDAE
